Activities performed:

SALVOVAR : WP3 leader. Study the decision drivers for therapeutics in poor prognosis ovarian cancer

Coordination of the project (Co-coordinator)

Expertise / Commitment offered

Description of your expertise:

The 3P Department, Hospices Civils de Lyon

The Health Promotion, Prevention and Population Health department ("3P") was created on 1 March 2024 within the Public Health Division of the Hospices Civils de Lyon (HCL). Its purpose is to deliver prevention and health promotion for patients, service users and the citizens of Greater Lyon as well as hospital staff, and to adapt health pathways for people with specific needs (disability, precarity, the perinatal period and early childhood). Its missions include coordinating clinical prevention practices with patients, relatives and carers; working across sectors with local health, medico-social, social, community and municipal actors; developing community-hospital prevention pathways; and training and research in prevention, health promotion and population health.

Making Every Contact Count. A core area of expertise is the development of the Making Every Contact Count strategy (in French "Pour que chaque contact compte", P3C). This approach embeds preventive clinical practice in health professionals' daily work and builds a shared culture of prevention. 3P develops this strategy at two levels:

- **Within the hospital:** it supports clinical teams to use routine patient contacts for brief, opportunistic prevention interventions and appropriate referral.
- **Across the territory:** it works with primary care professionals, community health organisations and local authorities so that prevention messages and referral pathways stay consistent between hospital and community.

The department secured regional health agency funding (ARS Auvergne-Rhône-Alpes) to pilot the approach in HCL's Eastern hospital group (the Parer'tape project). P3C is also a priority of its contribution to HCL's 2035 Strategic Plan.

Tertiary prevention integrated into care pathways. 3P also has expertise in tertiary prevention built into care pathways. The aim is to prevent recurrence, complications and comorbidities in people already living with a disease, for example after a cardiovascular event or after cancer.

Evaluation and research. As an academic hospital department, 3P runs most of its projects as action research, linking scientific knowledge production with concrete improvement of practice. It evaluates experimental care models funded under Article 51 for the national health insurance fund (CNAM) and the Ministry of Health, and works for the interministerial agency against drugs and addictive behaviours (MILDECA). Recent evaluations cover:

- mental health recovery and early-intervention programmes (SIIS, HOME, DIPPE);
- school-based obesity prevention (PRALIMAP-INES in Guadeloupe);
- supervised drug consumption sites in Paris and Strasbourg.

Its flagship project, PASSE-PASSE, is a three-year action-research study of a coordinated, resident-informed programme on the weight of children aged 0–10. It runs in two priority neighbourhoods of Lyon and is compared with two similar control areas. It is co-governed with the City of Lyon's Health Directorate. The department also co-pilots HCL's disability policy and teaches across the full university curriculum.
