Former participation in a funded FP European project?	☒ YES ☐ NO Project SLEEP REVOLUTION (Horison2020), Erasmus+ Strategic Partnerships

Expertise / Commitment offered

Description of your expertise:

Institute of Dentistry is particularly interested in contributing to prevention and management strategies for chronic non-communicable diseases in children and young people, including research addressing shared behavioural and lifestyle risk factors, oral-health inequalities, health promotion, early prevention and implementation of preventive interventions. The Institute combines clinical expertise, research and education and has experience in developing and evaluating preventive approaches for different patient groups.

Within the consortium, the Institute would be an excellent partner to contribute to work related to the design, implementation and evaluation of preventive interventions targeting children, adolescents and vulnerable population groups. The Institute can provide expertise in behavioural risk assessment, oral health promotion, patient engagement, clinical data collection, outcome evaluation and implementation research. In addition, it has strong capacity to support stakeholder involvement, dissemination activities and the translation of research findings into evidence-based recommendations for healthcare practice and public health policies.
